

Bebco Industries

Industrial Shelters Division

Our Newest Innovation!

Fiberglass Shelters in any size, from 6x6 to 24x50, with 8 distinct roof styles to meet your specific application

From analyzer houses, control rooms and laboratories to switch-gear buildings, data loggers units and metering stations, Bebcos can do it all.

The Leading Example of Craftsmanship...

... beginning from the basic concept of meeting your specifications

Bebco Industrial Shelters are manufactured in a variety of ways from various industrial materials including carbon steel, galvanized steel, stainless steel, aluminum and composite materials. Organic substrates, such as wood or paper are never utilized, because they cannot endure the harsh nature of environments that will be encountered in the industrial market. Where our competitor's products have been proven to fail in service is where Bebcos exerts the greatest amount of effort, clearly aimed at resolving issues such as premature deterioration, corrosion and structural failure. For this reason, Bebcos Industrial Shelters have proven time and time again to out-last the equipment or valued resources they were intended to protect.

... not just a building manufacturer, more like a solution provider

Over the years, Bebcos has adapted our Industrial Shelter Division products to meet an extremely broad variety of needs. From analyzer houses, control rooms and laboratories to switch-gear buildings, data loggers units and metering stations, Bebcos has done it all. This vast level of experience has enabled Bebcos to become familiar and experienced at solving virtually any engineering obstacle imaginable. Whether it is the sump base, blowout panels, gas detection and fire suppression systems required for a chemical storage unit or the raised flooring, suspended ceilings, laminated surfaces, and cable tray systems necessary for a redundant telemetry CIMS unit, Bebcos has the ability to interact with you on your level to meet the specific and demanding requirements of your particular situation.

... complete fabrication services, from the ground up

With an endless array of equipment and a seasoned staff of expert craftsmen, Bebcos produces every aspect of our Industrial Shelters in our own facility. Structural framing, sheet metal fabrication, welding and the application of various finishes are all accomplished under roof, in facilities specifically designed to facilitate each process. With the recent addition of our Delaney Road Facility, a 110,000 square foot product fabrication building, featuring a 40 ton overhead bridge crane with a 50 foot hook height, Bebcos has the space to complete any scale of work you require.

... composite wall and roof systems now available

Our newest addition to the Bebcos Industrial Shelter Division product line is Industrial Duty Fiberglass Shelters. Built around the most complete specification ever written, this product is offered in several configurations with multiple roof styles, to give you the greatest choice of options to exercise.

... complete engineering and equipment installation services

Rounding out the reasons why you should choose Bebcos as the supplier for your next industrial shelter, Bebcos offers a full complement of CAD based engineering services from design to certification. Whether issues revolve around hazardous locations, critical weight load or municipal code compliance, you'll find Bebcos ready and eager to respond in a professional manner and equally capable of acquiring third party certification or approval of both engineering data and your finished product.

Review our Literature and see why Bebcos Industrial Shelters are known as the finest modular industrial buildings available.
